Aditya Gaur

B.Tech Computer Science and Engineering | Batch 2023–27 | CHRIST (Deemed to be University), Bengaluru
aditya2405gaur@gmail.com • +91 98171 60827 • LinkedIn • GitHub • Bengaluru, Karnataka

Summary

Cloud & DevOps Engineer skilled in AWS, Azure, Docker, Kubernetes, Terraform, and CI/CD automation (GitHub Actions). Experienced in IaC, serverless architecture, and self-monitoring MLOps pipelines with automated retraining and drift detection, backed by strong Linux and cloud security (IAM, VPC) fundamentals.

Work Experience

AI Intern – Data & ML Jul 2026 – Present
FutureStrive

- Built and deployed FastAPI backend services with RAG-based retrieval over vector databases, powered by EDA and feature engineering on construction datasets (CSV and image data) for a ConTech intelligence platform.
- Deployed and maintained production ML/backend pipelines on Microsoft Azure, provisioning cloud infrastructure for scalable, reliable delivery.

Vulnerability Assessment and Penetration Testing Intern Apr 2025 – May 2025
Global Technology & Information Security (GTIS), Gurugram

- Assessed web application security using Burp Suite and Kali Linux in alignment with OWASP Top 10 practices
- Gained exposure to network security, including Wi-Fi and Bluetooth attack techniques.

Projects

Serverless File Sharing Portal | Python, AWS Lambda, API Gateway, S3, DynamoDB **Live Demo** | GitHub

- Developed a serverless data-sharing platform adopted by 75+ students, enabling 250+ secure file shares through shortened pre-signed URLs, with DynamoDB for metadata storage and query-driven retrieval.
- Implemented IAM-based access control and pre-signed S3 URLs for scalable, time-limited data access and secure storage management.

Maritime Anomaly Detection System | PyTorch, MLflow, Transformer, FastAPI, Docker, Kubernetes GitHub

- Architected an end-to-end, self-learning MLOps pipeline for real-time maritime anomaly detection: MLflow for experiment tracking, FastAPI for model serving, Docker/Kubernetes for containerized deployment via GitHub Actions CI/CD.
- Built automated data-drift detection and self-triggered retraining using Evidently AI for closed-loop monitoring, sustaining robust inference on highly imbalanced (0.3% anomaly) production data.

CI/CD Failure Analyzer | Python, FastAPI, Docker, n8n, Streamlit GitHub

- Developed a CI/CD log analysis system to auto-detect failed pipeline stages and deployment errors, reducing manual triage effort.
- Containerized backend services with Docker and automated monitoring/alerting via n8n for faster incident response.

Technical Skills

Languages: Python, MySQL, Bash
Cloud Platforms: AWS (EC2, Lambda, S3, IAM, VPC, API Gateway, DynamoDB, CloudWatch), Microsoft Azure
DevOps & Automation: Docker, Kubernetes, Terraform, CI/CD (GitHub Actions), IaC, Linux, Git, GitHub, n8n
MLOps & Monitoring: MLflow, Evidently AI, Data Drift Detection, Automated Retraining, Observability
Frameworks & Security: FastAPI, REST APIs, Microservices, DevSecOps, Burp Suite, Kali Linux, OWASP Top 10

Education

Christ University Kengeri, Bengaluru 2023 – 2027
B.Tech in Computer Science and Engineering (CGPA: 9.4/10) *Present*

GD Goenka International School
Class XII: 83.40% *Class X: 90.20%*
